

Moleculera Biosciences, Inc. is the Sole Testing Laboratory for the Autoimmune Brain Panel™
(formerly known as the Cunningham Panel™)
for identification of immune-mediated neurologic, psychiatric, and behavioral disorders.

Moleculera Biosciences is a CLIA certified clinical laboratory offering testing services for immune-mediated neurologic, psychiatric, and behavioral disorders. The company has received COLA lab accreditation along with the Laboratory Excellence Award for their commitment to quality patient testing and laboratory practices. The Oklahoma City-based CLIA laboratory is currently the only laboratory in the country offering this specialized testing panel to identify these autoimmune neurologic conditions, which are often associated with autoimmune encephalitis. Symptoms are typically characterized by obsessive-compulsive disorders (OCD), motor tics, and are sometimes associated with Autism Spectrum Disorders.

Moleculera Biosciences provides clinical testing services for individuals believed to be suffering from perplexing autoimmune neurologic conditions. The biomarker targets in the Autoimmune Brain Panel™ arose from over 20 years of research in the academic laboratory of Dr. Madeleine Cunningham at the University of Oklahoma. The panel was made commercially available in April 2013. Based in Oklahoma City, Moleculera Biosciences is licensed to accept physician's orders for patient testing from all 50 states.
